PROFESSIONAL SUMMARY

Computer Science undergraduate with hands-on experience in full-stack web development, gained through an internship at OCAC and independent projects. Skilled in building responsive, interactive web interfaces using HTML5, CSS3, and JavaScript, with working knowledge of React.js, Python, and machine learning libraries. Seeking a placement opportunity to apply strong front-end development, problem-solving, and project delivery skills in a Web Developer role.

EDUCATION

Sri Sri University

Cuttack, Odisha

Bachelor of Technology in Computer Science and Engineering | CGPA: 7.53 / 10.0 Aug. 2023 – May 2027

Mahabodhi College

Gaya, Bihar

Class 12th (Higher Secondary) | Percentage: 71.2%

National Public School

Gaya, Bihar

Class 10th (Secondary) | Percentage: 71.4%

EXPERIENCE

Software Engineering Intern — OCAC (Odisha Computer Application Centre) Bhubaneswar, Odisha

Internship Training Programme on Software Engineering – Full-Stack Development. June 08, 2026 – July 06, 2026

- Completed an internship training programme on Software Engineering – Full-Stack Development conducted by OCAC, covering practical, hands-on web development skills.
- Built an Interior Design website using HTML5, CSS3, and JavaScript, implementing a multi-section responsive layout.
- Designed and integrated custom CSS/JavaScript animations to enhance page interactivity and overall user experience.

TECHNICAL SKILLS

Programming Languages: Python, JavaScript (ES6+)

Machine Learning: Python ML Libraries

Frontend Development: HTML5, CSS3, JavaScript, React.js (Basic)

Content Management: WordPress (Basic)

Platforms & Version Control: Jupyter Notebook, VS Code, Git, GitHub

APIs & Integrations: OpenAI API, Google Maps Platform

PROJECTS

AI-Powered Group Travel Planner React.js | Node.js | LangChain | GPT-4 | MongoDB | Socket.io

- Built a full-stack collaborative web application with React.js front-end and Node.js/Express back-end; integrated OpenAI GPT-4 via LangChain to auto-generate structured JSON itineraries from multi-user inputs.
- Implemented real-time multi-user collaboration using Socket.io, supporting up to 10 concurrent users with sub-100ms synchronization latency and live voting/editing features.
- Delivered geographically optimized itineraries factoring in proximity and operating hours; achieved 90%+ user acceptance rate and cut planning time from hours to under 2 minutes.

Deepfake Audio Detection — Web Dashboard

Python | PyTorch | FastAPI | React.js

- Developed a React.js + FastAPI web interface allowing users to upload audio clips and receive real-time deepfake detection results, bridging an ML model with a user-friendly browser UI.
- Engineered an end-to-end pipeline extracting MFCCs, LFCCs, and CQCCs features; benchmarked ResNet and Bi-LSTM architectures achieving 94.5% accuracy and 3.2% EER on ASVspoof dataset.
